We accept credit and purchase cards.

Our clients often need to assess, develop, re-imagine, and deploy data, systems, knowledge, people, and processes to disparate and remote workforces. With cybersecurity threats occurring in zero-day patterns, the need for multifunctional agile teams of security professionals at all skill levels with strict security requirements within highly regulated environments will never cease. Our standardized, automated Cybersecurity frameworks (NIST, FISMA, etc.) give customers the ability to assess, audit, integrate, implement, and support our nation's most sensitive capabilities and remain fortified and resilient to malicious threats befall our nation.

Our Culture

FWDthink is a consultancy not confined by traditional thinking; a company that encourages and empowers its employees and clients to go beyond "the way it has always been done" – one that moves the world's ideas **FWD**. We love to solve complex problems and have fun doing it!

Cybersecurity Core Competencies

FWDthink has worked with federal, state, and local governments, large commercial companies, and non-profit entities by delivering subject matter experts, training and coaching, and support staff to accomplish mission-critical objectives. Our specific cybersecurity capabilities include:

- RPA/AI innovation for cybersecurity monitoring
- Cybersecurity compliance, Authority to Operate (ATO), Authority to Proceed (ATP), AISSO, and ISSO support
- IT Assessment, site visits, strategic road mapping, and technology architecture designs
- Operations and Maintenance, Business Solutions, Cloud Migration Strategy, Information Security and Disaster Recovery for Hybrid (cloud, on-prem) Infrastructure
- Risk Assessments and Vulnerability Mitigation Support
- Cybersecurity coaching and training on best practices and new emerging threat protection identification
- NIST/DISA framework governance for systems and applications
- Third-party dependency analysis, Software Build of Materials
- Threat hunting and heuristic analysis
